EDUCATION

The University of British Columbia

Bachelor of Applied Science in Chemical Engineering, Process Engineering

Vancouver, BC

September 2021 - Present

PROFESSIONAL EXPERIENCE

Arc Resources Ltd.

Student, Reservoir Engineering

Calgary, AB

May 2026 - Present

- Supporting CleanBC funding applications for emissions reduction projects
- Assisting with GHG emissions calculations and regulatory analysis for BC facilities
- Evaluating and developing industrial heat pump opportunities

Cenovus Energy Inc.

Student, Reservoir Engineering

Calgary, AB

May 2025 - April 2026

- Developed 4 enterprise Power BI dashboards supporting well performance reviews, production and type curve forecasting, program alteration evaluation, and tracer diagnostics; now hosted on SharePoint for ongoing team use.
- Built automated data workflows using Power Query, VBA, and structured data models, improving data integrity and reducing manual processing for engineering analyses.
- Acted as a team SME for Power BI, Power Apps, Power Automate, and Databricks, assisting engineers, technologists, and co-op students in adopting analytics and automation tools.
- Played a leading role in the 2025 CHO Tracer Program (33 multilateral wells), performing inflow allocation analysis, tracer mass-balance calculations, and well diagnostics to evaluate lateral performance. Temporarily assumed primary coordination responsibilities following the departure of a staff engineer.
- Presented tracer program findings to five teams across the Conventional Heavy Oil group and troubleshoot sampling logistics and production data management while liaising with the tracer service provider.
- Conducted subsurface evaluations including CO₂ migration tracking, volumetric estimates, reservoir mapping, and production forecasting using AccuMap, Value Navigator, and engineering datasets.
- Authored 17 EOR royalty incentive applications for Saskatchewan multilateral wells.
- Presented downhole hole and liner size optimization analysis to senior leadership, informing completion design decisions.
- Identified and wrote a proposal for a well completion optimization opportunity (recompletion) using AccuLogs and WellView.

UBC Extended Learning

Academic Assistant

Vancouver, BC

May 2024 - April 2025

- Collaborating on the development of micro-certificate programs that equip professionals with advanced knowledge and skills for career growth.
- Updated and enhanced foundational academic courses, to strengthen student success in mathematics, writing, and essential skills development.

- Led the continuous improvement of the UBC Academic Essentials course, ensuring new UBC students build foundational skills in mathematics, writing, and overall academic success.
- Developed HTML, CSS, and web design skills to enhance user experience and course functionality.
- Collaborated with faculty members to maintain up-to-date content, organizing weekly check-ins to align course material with academic standards.
- Currently contributing to the design and launch of micro-certificate courses, and actively leading the development of a course course to optimize student onboarding.

ATCO Gas Ltd.

Edmonton, AB

Systems Planning Co-op Student, Distribution Engineering

May 2023 - December 2023

- Led a station consolidation project in Fort Saskatchewan, addressing two significant safety concerns and enhancing operational efficiency through process optimization.
- Built hydraulic models independently using SynergiGas to analyze distribution networks, working closely with transmission and facilities engineering teams for equipment sizing and system alterations.
- Authored over 20 project proposals for pipeline upgrades and customer load shifts, including a pipeline replacement proposal that saved \$110k in maintenance costs.
- Trained a co-op student and a new EIT on hydraulic modeling, technical reporting, and pipeline distribution systems, ensuring a smooth handover of responsibilities.

Aecon Group Inc.

Mississauga, ON

Project Coordinator Co-op Student, Finch LRT

May 2022 - August 2022

- Supported the Finch LRT project by generating detailed progress reports, updating AutoCAD drawings to ensure safe excavation around pipelines, and calculating excavation volumes to maintain accurate contractor charges.
- Created clear and detailed weekly reports on construction progress, water main isolations, road closures, and schedule delays for managers, project coordinators, and City of Toronto representatives.
- Worked with AutoCAD to plot surveyed pipe locations on existing drawings to avoid existing pipelines when excavating, ultimately promoting the safety of field workers.
- Used modeling software to find the volume of excavated material to ensure that contractors would be charged accurately.

LEADERSHIP & ACTIVITIES

Avatar Innovations

Calgary, AB

Venture Development Participant, Ignite

February 2026- May 2026

- Developed a venture concept addressing waste-to-value opportunities in oil sands operations
- Conducted market research, technical feasibility analysis, and early-stage economic evaluation
- Collaborated with industry mentors and cross-functional teams to refine problem definition and solution approach

Student Energy UBC Chapter

Vancouver, BC

President, Co-founder

December 2022 - Present

- Worked with 3 other founders, Student Energy Global, and the UBC student society to establish a chapter by demonstrating the need for renewable energy education and initiatives across the UBC campus.
- Collaborated with a team and led projects and events related to clean energy and sustainability. Projects and events include:
 - Career fair with 20+ energy companies
 - Full-day clean energy conference with panels and keynote speaker
 - International representation at a Student Energy global conference
 - Workshops and case competitions on sustainability and clean energy
- Expanded chapter membership from 4 founding members to over 50 active participants and grew programming to include clean energy workshops, professor panels, and global conference representation.

UBC Sustainability Hub

Vancouver, BC

Sustainability Ambassador

September 2022 - April 2023

- Collaboratively planned and facilitated a comprehensive, hour-long workshop on climate anxiety and actionable solutions, engaging an audience of 50+ students.
- Co-organized and executed a successful clothing repair workshop and sustainable fashion fair in the AMS Student Nest as part of Sustainable Fashion Week at UBC.

PROJECTS

- **Solar Powered Wi-Fi Repeater** at xʷçíçəsəm Garden at the UBC Farm (2024):
 - Design and implementation in collaboration with UBC LFS and UBC Building Operations.
- **Bioethanol production** through fermentation of Corn Stover (2023):
 - Process design and technical report, including reactor design, purification P&ID, economic analysis, and safety risk assessment.
- **Energy-harvesting** Piezoelectric Floor Tile (2022):
 - Design, safety testing, and manufacture in collaboration with UBC Wastenauts design team.
